

**Guideline for authorship on WTA MCT manuscripts:**

Authorship is generally limited to two authors from each site with the order based on the number of cases submitted.

There are no limits on the numbers of authors listed by the Journal of Trauma. However, if there are a large number of participating sites, the PI may choose to limit the detailed list of authors to one per center. A list of additional authors should then be submitted to J Trauma as an acknowledgement, and all authors will be PubMed searchable.

The primary site should not list more than three authors prior to beginning the participating site authors, unless there are extenuating circumstances.

Authorship should be clearly communicated by the PI to all participating sites and potential authors.
